Update: Operations During COVID-19 Stay-at-Home Order

Alpha Measurement Solutions

Analytical Sensors & Instruments (ASI)

Aurora Scientific Instruments

Van London Co.

To: Business Partners of Alpha Measurement Solutions

In keeping our commitment to continuously inform you on the status of our employees and operations throughout the COVID-19 pandemic, we wish to provide this update regarding our plans and preparation in the event one of our operating jurisdictions issues a “stay-at-home” order. Although none of our state or local governments have issued such orders, we are prepared to continue our critical manufacturing operations under “stay-at-home” restrictions.

Continuing Critical Manufacturing Operations

Alpha Measurement Solutions operations qualify as “Critical Manufacturing” according to the guidelines provided by the Department of Homeland Security, Cybersecurity & Infrastructure Security Agency. Guidelines can be found on the CISA website: <https://www.cisa.gov/identifying-critical-infrastructure-during-covid-19>. In the USA, each of our facilities manufacture mission-critical products for the following essential industries:

- Water and wastewater systems
- Energy
- Food & agriculture
- Chemical
- Healthcare and public health
- Other critical manufacturing

We have received requests from customers in critical infrastructure sectors asking us to continue operations during this pandemic because we are a critical component of their supply chain. **We wish to ensure these customers that we will maintain operations** under the guidelines established by management in the previous weeks. This includes:

- Staggering our production schedule to limit the volume of employees in manufacturing and break areas;
- Reinforcing guidance regarding hygiene and continuously purchasing and manufacturing sanitizing supplies for employee use;
- Procuring face masks to distribute to all employees;
- Restricting all travel and nonessential visitor access, encouraging employees to hold business meetings remotely whenever possible;
- Procuring touchless thermometers to require fever screening for all individuals entering any of our facilities; and
- Requiring any employee who appears to have acute respiratory illness symptoms (i.e., cough, shortness of breath) or fever to be separated from other employees and sent home immediately.

Our facilities in the USA and China remain open at full strength, and will remain open until further notice. Our global manufacturing sites are vertically integrated and we foresee no immediate impact to production and supply. We are closely monitoring logistics to ensure product and part supply in North America and China.

We will continue to use guidance from health authorities to direct our business practice. You can expect to receive further updates as the situation evolves.

Sincerely,

Drew Hall
